- Change visualization by pivoting a report, or configuring the view type and format
- Add, modify, remove measures in charts and reports
- Ability to export Information and formatted Reports to PowerPoint, Excel, Word, and PDF

Healthcare data is one of the most valuable assets that healthcare organizations possess. All Healthcare organizations, large and small, are constantly looking to leverage data to obtain actionable information that can be used for improving the health and wellness of their members in the most cost effective manner.

However, for most organizations, data is highly fragmented and resides in multiple disparate systems, both internal and external, that are not integrated. Medium and Small organizations are significantly disadvantaged as it is not cost effective to develop customized solutions for their requirements.

Hexplora offers a comprehensive end-to-end Data Warehousing and Business Intelligence solution for Health Plans, ACOs, and IPAs. Based on years of experience implementing Data Management solutions for large payers and providers, Hexplora has been designed as a foundational platform for healthcare organizations for all their Reporting and Analytics requirements. Hexplora helps healthcare organizations achieve faster ROI by reducing unmanaged costs and improving Interventions and Outcomes.
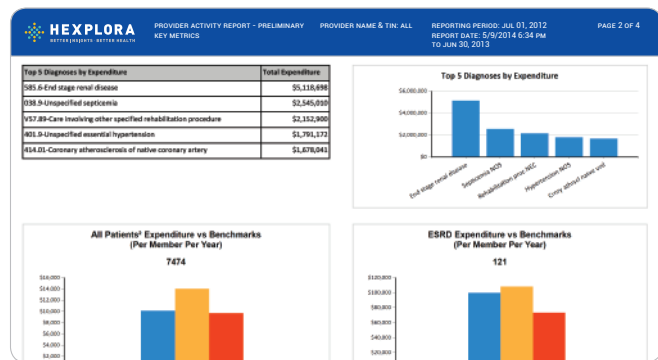

Hexplora Functionality
